Coral Reefs

Journal of the International Society for Reef Studies

Volume 1 1982/83

This journal supplies a focal point for the hitherto scattered literature in this rapidly expanding field of reef studies, publishing analytical and theoretical papers on both modern and ancient reefs. It encourages the search for generalisations about reef structure and dynamics, and reflects the growing awareness among reef workers of the importance of experimentation, modelling and quantification in reef studies.

Papers published in the journal deal with community structure, population dynamics of reef organisms, energy and nutrient flows, biogeochemical cycles, physiology of calcification, reef response to the physical environment, behavioural ecology, sedimentology, diagenesis, reef structure and morphology, and the evolutionary ecology of the reef biota.
